

OFFICIAL STATEMENT - USE OF RISKGUARD MANAGEMENT

Dear Risk Department,

The RiskGuard Management software is an Expert Advisor (EA) for MetaTrader 4 and 5, created exclusively to assist traders with risk management and manual trade execution.

RiskGuard does not place any trades autonomously. Every position is manually opened and managed by the user based on their own analysis and discretion. RiskGuard only:

- Calculates position size based on the selected risk
- Prevents the removal or increase of the Stop Loss
- Logs trades in a private journal
- Displays management data on the chart

To protect intellectual property and avoid tampering, the source code (.mq4/.mq5) will never be provided under any circumstances. However, we guarantee that the EA does not include any form of automated strategy or replication system.

Using RiskGuard does not expose the prop firm to group trading risks or strategy duplication, as every trade is manually placed and uniquely controlled by the trader.

We remain available for any further technical clarifications or checks.

Kind regards,

The RiskGuard Management Team
